Contents of Volume 42

Number 1, January 8, 1971

ANUEL RUBIN, HENRY GANG, AND CHARLES S. LIEBER. Interaction of Ethanol and Pyrazole with Hepatic Microsomes 1

OGAWA AND R. G. SHULMAN. Observation of Allosteric Transition in Hemoglobin 9

H. BYINGTON. Effects of Triphenyltin Compounds on the Adenosine Triphosphatase Activity of Beef Heart Submitochondrial Particles 16

AVID L. REICHENBACH, GEORGE E. SCHAIBERGER, AND BENNETT SALLMAN. The Effect of Thymine Starvation on Chromosomal Structure of *Escherichia coli* JG-151 23

L. CHURCH AND R. A. CONSIGLI. DNA Fragmentation in a Clonal Line of Rat Pituitary Tumor (GH_1 Strain) 31

Y. YAMAMOTO, Y. WANG, AND L. KAMITE. A Chloroplast Absorbance Change from Violaxanthin De-Epoxidation. A Possible Component of 515 nm Changes 37

H. CASWELL AND J. D. HUTCHISON. Visualization of Membrane Bound Cations by a Fluorescent Technique 43

V. SCHALLY, Y. BABA, A. ARIMURA, T. W. REDDING, AND W. F. WHITE. Evidence for Peptide Nature of LH and FSH-Releasing Hormones 50

N HARWOOD AND DAVID H. SMITH. Catabolite Repression of Chloramphenicol Acetyl Transferase Synthesis in *E. coli* K_{12} 57

M. L. GOODGAME AND SANDRA V. WAGGETT. E.P.R. Evidence for the Linking of Copper(II) Ions by Hypoxanthine and by 4-Azabenzimidazole 63

ESTER GOLDSTEIN. A Novel Method for Demonstrating a Nuclear 30-32S Precursor of the RNA of the Smaller Ribosomal Subunit in *Amoeba proteus* 67

G. BISHOP, KIRSTEN S. ANDERSEN, AND ROBERT M. SMILLIE. Incomplete Membrane-Bound Photosynthetic Electron Transfer Pathway in Agranal Chloroplasts 74

LING. Sequence at the 5'-End Bacteriophage f2 RNA 82

OY P. MACKAL, BETTY WERNINGHAUS, AND E. A. EVANS, JR. Origin of DNA and Protein in λ DNA Infected Disrupted Cell Preparations 89

ENATO BIANCHETTI, GIOVANNI LUCCHINI, AND M. LUISA SARTIRANA. Endogenous Synthesis of Formyl-Methionine Peptides in Isolated Mitochondria and Chloroplasts 97

ASAO TAKEDA, HIROHEI YAMAMURA, AND YUZO OHGA. Phosphoprotein Kinases Associated with Rat Liver Chromatin 103

J. VREDENBERG. Changes in Membrane Potential Associated with Cyclic and Non-Cyclic Electron Transport in Photochemical System 1 in *Nitella translucens* 111

RIEDEL AND G. GERISCH. Regulation of Extracellular Cyclic-AMP-Phosphodiesterase Activity during Development of *Dictyostelium discoideum* 119

M. TAKAGI AND K. OGATA. Isolation of Serum Albumin-Synthesizing Polysomes from Rat Liver 125

ONALD W. ESTABROOK, ALFRED G. HILDEBRANDT, JEFFREY BARON, KARL J. NETTER, AND KENNETH LEIBMAN. A New Spectral Intermediate Associated with Cytochrome P-450 Function in Liver Microsomes 132

YUZURU ISHIMURA, VOLKER ULLRICH, AND JULIAN A. PETERSON. Oxygenated Cytochrome P-450 and Its Possible Role in Enzymic Hydroxylation 140

AWRENCE A. LOEB, JOHN P. SLATER, JOAN L. EWALD, AND SHYAM S. AGARWAL. *In Vitro* DNA Synthesis in the Presence of Antibody to Homogeneous *E. coli* DNA Polymerase 147

ERRATA 153

Number 2, January 22, 1971

GEORGE E. SHAMBAUGH, III, BOYD E. METZGER, AND NORBERT FREINKEL. Glutamine-Dependent Carbamyl Phosphate Synthetase in Placenta and Fetal Structures of the Rat 155

A. BONSIGNORE, I. LORENZONI, R. CANCEDDA, M. E. COSULICH, AND A. DE FLORA. Effect of Divalent Cations on the Structure of Human Erythrocyte Glucose 6-P Dehydrogenase 159

CATHERINE HAWTHORNE, VIRGINIA RIGGS, DEAN F. STEVENS, AND DAVID L. WELLER. The Purification and Partial Characterization of a Serum Factor Associated with a Neoplasm in Golden Hamsters 166

J. J. Marshall and Pamela M. Taylor. Acid α-D-Glucosidases from Plant Sources 1

Jack Preiss, Annemiek Sabraw, and Elaine Greenberg. An ADP-Glucose Pyrophosphorylase with Lower Apparent Affinities for Substrate and Effector Molecules in an *Escherichia coli* B Mutant Deficient in Glycogen Synthesis 1

E. M. Reimann, C. O. Brostrom, J. D. Corbin, C. A. King, and E. G. Krebs. Separation of Regulatory and Catalytic Subunits of the Cyclic 3',5'-Adenosine Monophosphate-Dependent Protein Kinase(s) of Rabbit Skeletal Muscle 1

D. H. Williamson and Ethel Moustacchi. The Synthesis of Mitochondrial DNA During the Cell Cycle in the Yeast *Saccharomyces cerevisiae* 1

Walter J. Dobrogosz and Pat B. Hamilton. The Role of Cyclic AMP in Chemotaxis in *Escherichia coli* 2

Marvin Edelman, Inder M. Verma, Danielle Saya, and Uriel Z. Littauer. Optical Absorbance Properties of Mitochondrial Ribosomal RNA 2

Y. Hayashi and T. P. Donaghue. Cytoplasmic Polyhedrosis Virus: RNA Synthesized *In Vivo* and *In Vitro* in Infected Midgut 21

J. Jänne and H. G. Williams-Ashman. Dissociation of Putrescine-Activated Decarboxylation of S-Adenosyl-L-Methionine from the Enzymic Synthesis of Spermidine and Spermine by Purified Prostatic Enzyme Preparations 22

K. B. Tan and B. R. McAuslan. Inhibition of Nucleoside Incorporation into HeLa Cells by Streptovaricin 23

R. J. Staneloni and R. Piras. Reversible Aggregation of Muscle Glycogen Synthetase by Metabolites 23

Karim Hechemy and Howard Goldfine. Isolation and Characterization of a Temperature-Sensitive Mutant of *Escherichia coli* with a Lesion in the Acylation of Lysophosphatidic Acid 24

J. Bornstein, J. McD. Armstrong, F. Ng, B. M. Paddle, and L. Misconi. Structure and Synthesis of Biologically Active Peptides Derived from Pituitary Growth Hormone 25

Srinivasan Rajalakshmi, Hildegardis Liang, D. S. R. Sarma, Robert Kisilevsky, and Emmanuel Farber. Cycloheximide, an Inhibitor of Peptide Chain Termination or Release in Liver In Vivo and In Vitro 25

Information for Contributors

Manuscripts in duplicate may be sent to any one of the editors whose names and addresses are listed on the inside front cover.

In order to assure rapid and accurate publication, it is essential that manuscripts be prepared according to the instructions given below. Manuscripts which do not conform to these specifications may have to be returned for retyping.

Preparation of Manuscripts

Article length should not exceed 5 typewritten pages, double-spaced on 8½ x 11″ high quality paper (the complete manuscript, including space occupied by figures and tables, should be not more than 8 pages long).

Summary: The article must be preceded by a brief summary, typed single-spaced, not to exceed 10 lines in length (approximately 100-150 words). This paragraph should adequately summarize the pertinent findings of the paper.

Typing. Since articles are reproduced directly from manuscripts, the latter must be typewritten on good quality white bond paper. A black silk or carbon typewriter ribbon should be used, and special care should be taken to insure a sharp, clean impression of letters throughout. Use of an electric typewriter is strongly recommended. Erasures should be avoided. Care must also be taken to avoid errors in spelling, word division, and punctuation.

Manuscripts should be double-spaced, on only one side of the sheet; **references, footnotes, and figure legends should be single-spaced.** Typing area of the page must be as close as possible to 6½″ wide by 9½″ long.

Use of Symbols and Abbreviations. Abbreviations except for those in the Commission on Biochemical Nomenclature Document #1 (*Arch. Biochem. Biophys.* **115,** 1-12 (1966)) must be defined, and ambiguous abbreviations such as TCA, or P to signify anything but phosphate, should be avoided. Authors are urged to use chemical formulas, such as CCl_3COOH, wherever possible. If improper abbreviations are used it may be necessary to return manuscripts for retyping, which will delay their publication.

Footnotes should be typed single-spaced, at the foot of the page on which they are mentioned in the text. References and figure legends should be typed single-spaced on separate pages.

Illustrations and Tables. Photographs are acceptable. Mathematical or chemical symbols that cannot be typed should be inked in carefully in black. Structural formulas should be drawn in black ink. Illustrations and tables should be submitted on separate sheets. **Do not attempt to insert the figures, figure legends, or tables into the text.** This will be done by the Publishers.

All drawings should be done in black ink on white paper or tracing cloth; they must be planned for reduction to a width of not more than 5″. Final size of the printed page is 5½ x 8⅜″; figures must be planned to fit these proportions.

Graph paper, if used, should be ruled in blue; grid lines that are to show in the final reproduction should be inked in black. High quality glossy prints are acceptable.

Page Numbers and Headings. Page numbers should be written lightly in blue (not typed) at the bottom of each page.

The title of the paper should be typed in capital letters near the top of the first page, with the name(s) and affiliation(s) of the author(s) typed just below. Headings within the article should be arranged according to their relative importance.

References to the literature may be cited by number and listed in numerical order in a single-spaced list placed at the end of the manuscript. Abbreviations of journal titles should be those used in *Chemical Abstracts.*

Mailing. To avoid creasing, please place manuscripts between cardboards when mailing.

Reprints

Reprint order forms are sent to the authors immediately upon acceptance of their manuscripts. The price list is included.
